S. federal law restricts this device to sale by or on the order of a use!The Philips Respironics REMstar SE system delivers positive airway pressure therapy for the treatment of Obstructive Sleep apnea in spontaneously breathing patients weighing over 30kg (66 lbs).3 It is for use in the home or hospital/institutional device is to be used only on the instruction of a licensed physician. Your home care provider will make the correct pressure settings according to your health care professional's accessories are available to make your OSA treatment with the REMstar SE system as convenient and comfortable as possible. To ensure that you receive the safe, effective therapy prescribed for you, use only Philips Respironics warning indicates the possibility of injury to the user or the operator.4 This MANUAL serves as a reference. The instructions in this MANUAL are not intended to supersede the health care professional's instructions regarding the use of the device. The operator should read and understand this entire MANUAL before using the device. This device is not intended for life support. The device should be used only with masks and connectors recommended by Philips Respironics or with those recommended by the health care professional or respiratory therapist. A mask should not be used unless the device is turned on and operating properly.5 The exhalation port(s) associated with the mask should never be blocked. Explanation of the Warning: The device is intended to be used with special masks or connectors that have exhalation ports to allow continuous flow of air out of the mask. When the device is turned on and functioning properly, new air from the device flushes the exhaled air out through the mask exhalation port. However, when the device is not operating, enough fresh air will not be provided through the mask, and exhaled air may be rebreathed.6 Rebreathing of exhaled air for longer than several minutes can in some circumstances lead to suffocation. If you are using a full face mask (a mask covering both your mouth and your nose), the mask must be equipped with a safety (enainment) valve. When using oxygen with this system, the oxygen supply must comply with local regulations for medical oxygen. Oxygen supports combustion. Oxygen should not be used while smoking or in the presence of an open flame. When using oxygen with this system, turn the device on before turning on the oxygen.7 Turn the oxygen off before turning the device off. This will prevent oxygen accumulation in the device. Explanation of the Warning: When the device is not in operation and the oxygen flow is left on, oxygen delivered into the tubing may accumulate within the device's enclosure. Oxygen accumulated in the device enclosure will create a risk of fire. When using oxygen with this system, a Philips Respironics Pressure Valve must be placed in-line with the patient circuit between the device and the oxygen source.8 The pressure valve helps prevent the backflow of oxygen from the patient circuit into the device when the unit is off. Failure to use the pressure valve could result in a fire hazard. Do not connect the device to an unregulated or high pressure oxygen source. Do not use the device in the presence of a flammable anaesthetic mixture in combination with oxygen or air, or in the presence of nitrous oxide. Do not use the device near a source of toxic or harmful vapors. Do not use this device if the room temperature is warmer than 35 C (95 F).9 If the device is used at room temperatures warmer than 35 C (95 F), the temperature of the airflow may exceed 43 C (109 F). This could cause irritation or injury to your airway. Do not operate the device in direct sunlight or near a heating appliance because these conditions can increase the temperature of the air coming out of the device. Contact your health care professional if symptoms of Sleep apnea recur. If you notice any unexplained changes in the performance of this device, if it is making unusual or harsh sounds, if it has been dropped or mishandled, if water is spilled into the enclosure, or if the enclosure is broken, disconnect the power cord and discontinue use.10 Contact your home care provider. Repairs and adjustments must be performed by Philips Respironics-authorized service personnel only. Unauthorized service could cause injury, invalidate the warranty, or result in costly damage. Periodically inspect electrical cords and cables for damage or signs of wear. Discontinue use and replace if damaged. To avoid electrical shock, always unplug the power cord from the wall outlet before cleaning the device. DO NOT immerse the device in any fluids. If the device is used by multiple persons (such as rental devices), a low-resistance, main flow bacteria filter should be installed in-line between the device and the circuit tubing to prevent MANUAL Be sure to route the power cord to the outlet in a way that will prevent the cord from being tripped over or interfered with by chairs or other furniture. Premarket notification, AFLEX, REMstar Auto A-Flex USER MANUAL, REMstar SE, Food and Drug Administration #1 04-22-2013, 12:45 PM Philips-Respironics REMstar SE Setup Menu instructions - Philips-Respironics Series 60 REMstar SE Setup Instructions - A thoughtful Apnea Board member (Greogers In Toronto) posted the following instructions for entering the Setup Menu of the Philips-Respironics REMstar SE CPAP machine [pictured above]: Remove the adapter power cord from the back of the machine, wait a couple of seconds, then plug it back in. The unit should power up. Press the power on button, let the unit blow for a couple seconds, then press the power button again. The blower will shut off. Press the farthestmost button on the left (the Ramp button) and the left-arrow button right beside it, simultaneously, and hold them both down (around 5 seconds) until P-1 shows up on the display. This will indicate you are in the Setup Mode. At this point, you will be allowed to cycle through the setup menu. As you depress either the left or right arrow key, you will land on several icons on the display that indicate which setting you can adjust. You want to get to the cm H2O icon. Depress either left or right until you reach that icon. Press the power button once, and your pressure setting will blink. You may then use the left or right buttons to change your pressure setting. When you are done, simply press Ramp and the left-arrow button simultaneously, and hold until P-0 flashes briefly. You are then back in the standard operating mode. Please note that the left and right arrow keys may stick. You must be SURE you are pressing the left-arrow key independently. I found this was easiest to achieve by using my index finger to depress the Ramp button, and my pointer finger to depress the leftmost edge of the left-arrow button. I hope this helps others. (info edited for clarity) Donate to Apnea Board RE: Philips-Respironics REMstar SE Setup Menu instructions I thank God that I found this website! The instructions for the Remstar SE really helped - there is however one step missing. Just at the end after you set your pressure, you have to hit the right arrow button one time, then you can hold the left two buttons to get P-0. By trial and error I figured that out. RE: Philips-Respironics REMstar SE Setup Menu instructions AWESOME!!! Customer Service is getting terrible! My machine was back to the shop 3 times. They wouldn't believe me when I told them the heater would not work. Finally its sent to the factory and replaced with another one. I cant say if it was new or not. I set the machine up to go to bed and it has not been set up! I call Respironics and no help!! They will not help me I have to bring it to the Medical Supply Office. I am leaving at 0600 the next morning to work out of state. I found the Apnea Board. You saved my day showing me how to set up my machine!!!! RE: Philips-Respironics REMstar SE Setup Menu instructions yay team! QAL Dedicated to QALity sleep. You'll note I am listed as an Advisory Member. I am honored to be listed as such. See the fine print - Advisory Members as a group provide advice and suggestions to Apnea Board administrators and staff concerning Apnea Board operation and administrative policies. Membership in the Advisory Member group should not be understood as in any way implying medical expertise or qualification for advising Sleep Apnea patients concerning their treatment. Donate to Apnea Board RE: Philips-Respironics REMstar SE Setup Menu instructions As added info, we also have the Clinician Manual for the 60-Series Philips-Respironics REMstar SE. You can obtain it via email by following the directions in Section Three of this page: RE: Philips-Respironics REMstar SE Setup Menu instructions Trying to find a setup menu for this unit, is how I came to discover this great forum. This was my first purchase in getting some much needed help for my wife with her severe OSA. It was then that I discovered that the machine will only record and keep track of hours of use. It will only record that, and nothing else. Even if you can set your own high/low pressures, you will have no data to consult for best settings, when using this one. I upgraded immediately to the 60 series that she has and uses now, and using the Sleepyhead SW, her nightly events have dropped from the 50's - 60's, down to currently pretty consistent 2's and 3's. Thanks again to this forum, and all the wonderful help and advise that good folks here, are quick to extend. FLc #7 05-12-2015, 01:53 PM RE: Philips-Respironics REMstar SE Setup Menu instructions Thank you so much. I just got a machine via my poor-person's govt medical insurance, after having to bring my mother into the office with me to verify that I snore. Nobody wants to refer anyone out to a specialist. Anyway, I got a Resmed SE that has a big sticker saying "Property of XYZ SleepMed Company" on it, and it has a modem antenna on it to verify that I'm using it. So I was a bit scared to change the settings once I knew how. I was told I would have to call the sleep MD office, get an appointment, convince them why I need to have the cm raised, and then wait for him to contact the company who provided it. And has "all control" over it, I guess. I was able to raise my pressure a little without having to go through all that time-wasting (and govt money wasting) ridiculousness. I have asthma, and if it kicks in a little while I'm sleeping, maybe due to the humidifier going on and off, I need to breathe in more sharply and the air needs to move faster. So far, I've been sleeping 12 hours at a time and waking up super groggy. I am so glad to be able to make this change immediately and not wait a week while I lie down with a suffocating sensation. Now to call the company and discuss this glitchy humidifier. Thank you again! Donate to Apnea Board
